

DIGITAL SIGNAGE**ORGANIC DESIGN
OLED STELE 55"**

Based on a paper-thin 55" OLED wallpaper display the new ORGANIC DESIGN OLED STELE delighted with a flowing, organic shape and a material mix that is unique in the media technology world until now.

The used CORIAN® material provides maximum stiffness with minimal material thickness and is therefore ideally suited for use in public areas. The CORIAN® material is solid-colored so that the surfaces are stably and low-maintenance.

In addition to the enormous display contrasts, vibrant colors and deepest black level, the OLED display also impresses with its ultrathin design, which drastically reduces the number of reflections and maintains the same contrast ratio from every viewing angle.

For the first time, a picture quality that is comparable to high-gloss prints is achieved and fits perfectly and harmoniously into stylish surroundings such as hotel lobbies, foyers, department stores and showrooms.

The new ORGANIC DESIGN OLED STELE is now available at MediaScreen and can be delivered in all RAL colors.

FEATURES & FUNCTIONS

- Ultra-thin OLED HD display with only 5 mm overall depth
- Perfect black levels and vivid colors
- Perfect image from any viewing angle
- Elegant, robust and durable design stele
- Corpus out of solid-colored and exclusive Corian®
